

## **.TS to .MPG Manual File Conversion**

To manually convert previously saved .ts files to .mpg format you will need to use the TS2PS.exe tool used by WinTV 7.

This application will need to be run through a command prompt.

To open a command prompt on Windows 7/Vista click on Start/All Programs/Accessories/Command Prompt

In order to convert the file you will need three parameters.

First, you need to type the location of the TS2PS.exe file in quotes (the location may vary depending on your version of Windows):

**"c:\Program Files\WinTV\WinTV7\TS2PS.exe"**

**"c:\Program Files x86\WinTV\WinTV7\TS2PS.exe" (Windows 7/Vista 64bit)**

Next, you'll need to type in the name and location of the .ts file that you wish to convert. For this example we will use the default record location of WinTV 7:

**c:\Users\Public\Videos\test.ts**

Finally you'll need to type in the name and location to which you want to save the new .mpg file:

**c:\Users\Public\Videos\test.mpg**

Make sure you leave a space between each entry. Also, these parameters are not case-sensitive.
